Information screens to suit your reception area and your budget

Patients are called to appointments or can read health information, opening hours and other education messages whilst waiting to be seen.

- **Wide range of screens – scrolling widescreen to full colour flat screen**
- **Compatible with EMIS, GPASS, Vision, Isoft Premier and Synergy**
- **NEG work with Jayex – the industry leader**
- **Easy to administer and update**

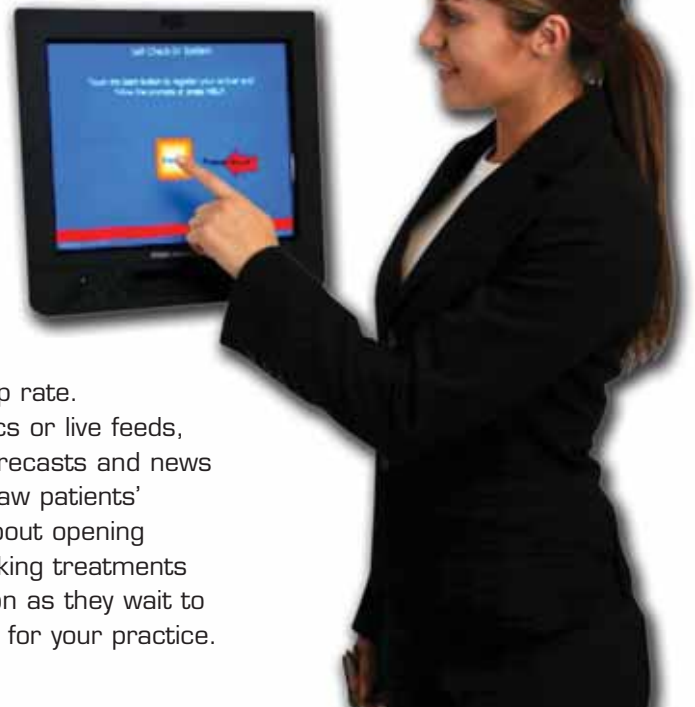

When a company has over 50% of the market, there is usually a good reason why. Working in partnership with Jayex, it becomes clear that NEG is working with an excellent company with a tremendous knowledge of GPs and their patients. As part of the Surgery Line system, we are able to offer you a wide choice of monitors to suit the size of your reception area and requirements of your patients.

With patient call-in screen, you have a selection of sizes and colours as well as different greeting options. Patients can be given a ticket and wait until their number is called or they can wait to be called by name. Screens can be silent or can make announcements –

in short, you can create the most appropriate combination to suit your patients' requirements.

Information screens can replace notice boards and have a far higher readership rate.

Using simple graphics or live feeds, including weather forecasts and news updates, you can draw patients' attention to news about opening hours, flu jabs, smoking treatments and other information as they wait to help achieve targets for your practice.

Case Notes

Comments from Practice Managers who have introduced this Surgery Line module...

"We always had problems with patients not reading notice boards and not being aware of classes that we ran. By using two information screens, patients are now aware of events that we run and attendance at these events has increased significantly"

"We have a large reception area which is an awkward shape. By working with the Surgery Line team, we were able to install 3 Jayex screens of varying sizes which make it clear when appointments are called"

"Easy to update and administer"

"I can see why Jayex screens are in 50% of practices across the county - I'm surprised they aren't in more"

"We have used our rebate from NEG to pay for the information screen - so in effect it costs us nothing! Very pleased with the results and the service"

This module from NEG integrates with your existing patient database. We recommend this module for any GP who wants to improve communications with their patients.

Remember to ask NEG about the new T2 service - the cost of this equipment can be entirely or partially funded by the saving you make on your outgoing calls, including free calls to other local surgeries and PCTs who have the T2 package.

Monthly costs for the LED Caller Display Service is £69.50, Media Presentation Manager is £89.50 and Speech / Number Call is £109.00.
